## 10 steps for international clients considering a Hair Transplant in Lagos

**V**inci Hair Clinic Africa [www.vincihairclinic.africa](http://www.vincihairclinic.africa) is part of a global group of clinics specialising in hair restoration for all hair types. [www.vincihairclinic.com](http://www.vincihairclinic.com).

Considering travelling to Lagos for your hair restoration? Here's a simple, stress-free guide to help you plan every step of the journey.

We've treated clients from the UK, USA, Ghana, Liberia, UAE, and across the diaspora so you're in trusted hands from consultation to full recovery.

We arrange an all-inclusive medical tourism package covering the option of flights, accommodation, airport transfers, and local support.

### 1. Book a FREE virtual consultation

Start with a no-obligation virtual consultation. Send clear photos of your hairline, crown, or beard area, and our medical team will assess your suitability, graft count, and expected results — all before you book a flight.

### 2. Video assessment by a Vinci Surgeon

Your journey begins with a personalised video consultation with one of our experienced Surgeons. During this session, we'll assess your hair loss pattern, discuss your goals, review any medical history, and recommend the most effective treatment approach. It's a confidential, professional, and obligation-free way to understand your options - all from the comfort of your home.

## Destination Lagos: For excellence in Hair Transplants

### 3. Personalised recommendation and quotation

We'll review your goals and our client coordinators will provide a personalised treatment plan and package for you, which will include a quote, graft estimate and travel recommendations.

### 4. Carry out your pre-surgery tests

Before travelling to Lagos, we recommend that clients carry out basic pre-surgery checks in a registered lab in your home country — such as blood tests or health screenings — to ensure you are medically fit for the procedure. Our team will provide a list of recommended tests and guide you through what's needed for a safe and successful Hair Transplant experience.

### 5. Book your surgery date

Once you're happy with the plan, we'll send a confirmation of your official treatment, a visa support letter (if required) for your Nigerian visitor visa, detailed next steps and pre-travel advice. We recommend planning for a 3 day stay in Lagos.

### 6. Arrive in Lagos

We can assist with flights, accommodation, airport pickup, and local logistics. We'll help you select the best dates based on your treatment and healing schedule. You should plan to stay in Lagos for 3 days for full care and monitoring. Your comfort and safety are a priority to us.

### 7. Pre surgery in-person consultation with a Vinci Surgeon

Before your procedure, you'll have an in-person consultation at our Lagos clinic with your Surgeon. This final step allows us to examine your scalp closely, confirm your treatment plan, answer any last questions, and ensure you're fully prepared for surgery. It's a vital part of delivering safe, personalised, and effective results. We make sure you feel completely confident before proceeding.

### 8. Surgery day

Your Hair Transplant will be done using the FUE technique. The procedure is performed under local anesthesia, lasts 4–8 hours depending on graft count, and you'll be awake, but completely comfortable.

### 9. Aftercare & Recovery

Our post-op regimen is tailored to your specific procedure and hair type, ensuring a smooth recovery and the best possible outcome. You'll also receive clear instructions and follow-up support — in person or remotely - wherever you are in the world. Our aftercare is one of our strongest differentiators from other clinics.

You'll go home the same day with your post-operative care kit. We'll give you written aftercare instructions and book a remote follow-up appointment.

For the next few days we will monitor you for healing progress, graft stability, and any swelling or discomfort. You'll receive detailed post-op instructions, specially formulated Vinci medication, and hair washing instructions.

Once you return home, you're not alone. Our medical team will check in with you virtually at key milestones, monitor your progress, answer any questions, and offer advice on growth, shedding, and regrowth stages. We offer regular quarterly virtual follow-ups with your Surgeon for up to a year, and complimentary in-person aftercare sessions if you are ever back in Lagos.

### 10. Dream hair journey begins

Our goal is long-lasting, natural results that restore your confidence. In the weeks and months following your Hair Transplant, you'll start to notice initial shedding (normal), new hair growth from 3–6 months, and full results by 9–12 months.
